

PRACTICAL # 1

Write a program that inputs a year and then check whether it is leap year or not.

```
#include <stdio.h>

int main() {
    int year;
    printf("Enter a year: ");
    scanf("%d", &year);

    if ((year % 4 == 0 && year % 100 != 0) || (year % 400 == 0)) {
        printf("%d is a leap year.\n", year);
    } else {
        printf("%d is not a leap year.\n", year);
    }

    return 0;
}
```

```
Enter a year: 2024
2024 is a leap year.

-----
Process exited after 2.894 seconds with return value 0
Press any key to continue . . .
```

Algorithm

1. Start
2. Declare a variable to store the year
3. Ask the user to enter a year
4. Read and store the entered year
5. Check whether the given year satisfies the rules of a leap year or not
6. If the year fulfills the leap year condition, display that it is a leap year
7. Otherwise, display that it is not a leap year
8. Stop
