

Practical # 5

Write the program that finds out the greatest number among three inputted number.

```
1  #include <stdio.h>
2
3  int main() {
4      int a, b, c;
5
6      printf("Enter three numbers: ");
7      scanf("%d %d %d", &a, &b, &c);
8
9      if(a >= b && a >= c) {
10         printf("%d is the greatest number.", a);
11     }
12     else if(b >= a && b >= c) {
13         printf("%d is the greatest number.", b);
14     }
15     else {
16         printf("%d is the greatest number.", c);
17     }
18
19     return 0;
20 }
```

```
F:\Practicals\lab5.exe
Enter three numbers: 3 5 7
7 is the greatest number.
-----
Process exited after 2.679 seconds with return value 0
Press any key to continue . . .
```

Algorithm:

1. Start
2. Input three numbers and store them in variables a, b, and c.
3. If $a \geq b$ and $a \geq c$,
4. → Then a is the greatest.
5. Else if $b \geq a$ and $b \geq c$,
6. → Then b is the greatest.
7. Else
8. → c is the greatest.
9. Display the greatest number.
10. End
