

Practical # 3

Write the program to generate the table of an inputted number.

```
1  #include <stdio.h>
2
3  int main() {
4      int num;
5
6      printf("Enter a number: ");
7      scanf("%d", &num);
8
9      printf("\nMultiplication Table of %d:\n", num);
10
11     for(int i = 1; i <= 10; i++) {
12         printf("%d x %d = %d\n", num, i, num * i);
13     }
14
15     return 0;
16 }
```

```
Enter a number: 7

Multiplication Table of 7:
7 x 1 = 7
7 x 2 = 14
7 x 3 = 21
7 x 4 = 28
7 x 5 = 35
7 x 6 = 42
7 x 7 = 49
7 x 8 = 56
7 x 9 = 63
7 x 10 = 70
```

Algorithm:

1. Start
2. Input a number from the user and store it in variable num.
3. Set $i = 1$.
4. Repeat steps 5 and 6 while $i \leq 10$:
5. Calculate $\text{product} = \text{num} * i$.
6. Display $\text{num} \times i = \text{product}$.
7. Increment i by 1.
8. End
