

Practical # 13

Write a program which uses Switch and break statements.

```
1  #include <stdio.h>
2
3  int main() {
4      int choice;
5
6      printf("1. Addition\n2. Subtraction\n3. Multiplication\n");
7      printf("Enter your choice: ");
8      scanf("%d", &choice);
9
10     switch (choice) {
11         case 1:
12             printf("You selected Addition.\n");
13             break;
14         case 2:
15             printf("You selected Subtraction.\n");
16             break;
17         case 3:
18             printf("You selected Multiplication.\n");
19             break;
20         default:
21             printf("Invalid choice.\n");
22     }
23
24     return 0;
25 }
```

```
Enter first number: 2
Enter second number: 6
Sum = 8
```

Algorithm:

1. Start
2. Declare a function sum1 that takes two integers as arguments and returns their sum
3. In main, declare variables to store two numbers and the sum
4. Read two numbers from the user
5. Call the function sum1 with the two numbers as arguments
6. Store the returned value in sum
7. Display the sum
8. End
