

Practical # 8

Write a program that generate characters corresponding to ASCII codes from 32 to 127 (using any loop).

```
#include <stdio.h>

int main() {
    int ascii;

    printf("ASCII Code : Character\n");
    printf("-----\n");

    for (ascii = 32; ascii <= 127; ascii++) {
        printf("%3d      : %c\n", ascii, ascii);
    }

    return 0;
}
```

ASCII Code : Character

32	:
33	!
34	"
35	#
36	\$
37	%
38	&
39	'
40	(
41	)
42	*
43	+
44	,
45	-
46	.
47	/
48	0
49	1
50	2
51	3
52	4
53	5
54	6
55	7
56	8
57	9
58	:
59	;
60	<
61	=
62	>
63	?
64	@
65	A

Algorithm:

1. Start
2. Declare an integer variable ascii
3. Use a loop from 32 to 127
4. For each value of ascii, convert it to its corresponding character
5. Print the ASCII code and the character
6. End
